

A Student's Inquiry Regarding Brain Machine Interfaces

Dear [],

Hello, my name is Yixuan Li, and I am a student from China. Thank you for taking the time to read this email.

I studied physics at the University of Science and Technology of China from 2018 to 2022 as an undergraduate, and since 2022, I have been researching computational neuroscience of *C. elegans* and zebrafish for my master's degree at [Wen Lab](#). For the future, I intend to work on Brain Machine Interfaces that enable paralyzed individuals to walk and talk again.

I am very interested in the research being conducted in your lab, but I am not familiar enough with this field yet. Would you please tell me more about it? If you say yes, I will send you some questions.

By the way, here is a link to my [blog](#), where I share my learning notes of physics, statistics, and computational neuroscience.

I would be grateful for any response.

Yours sincerely,

Yixuan Li.
